THE FACTOR

13 SEATS

Three things to fix in the model.

01 **Anchoring on 2021 baseline.**

Uniform-swing assumed corrections of 10-20pp; realised swing was 25-30pp.

02 **Hindu consolidation modelled as localized.**

The data shows it was the dominant statewide frame.

03 **SIR weight too small.**

Modelled as marginal; reality showed structural turnout asymmetry across all Muslim-majority clusters.

We'll be back

for the next nail-biter.
